# 1 ABOUT THIS MANUAL

#### 1.1 Purpose

This manual describes the assembly, installation, operation and troubleshooting of this unit. Please read this manual carefully before installations and operations. Keep this manual for future reference.

# 1.2 Scope

This manual provides safety and installation guidelines as well as information on tools and wiring.

# **2 SAFETY INSTRUCTIONS**

WARNING: This chapter contains important safety and operating instructions. Read and keep this manual for future reference.

- 1. Before using the unit, read all instructions and cautionary markings on the unit, the batteries and all appropriate sections of this manual.
- 2. **CAUTION** --To reduce risk of injury, charge only deep-cycle lead acid type rechargeable batteries. Other types of batteries may burst, causing personal injury and damage.
- 3. Do not disassemble the unit. Take it to a qualified service center when service or repair is required. Incorrect re-assembly may result in a risk of electric shock or fire.
- 4. To reduce risk of electric shock, disconnect all wirings before attempting any maintenance or cleaning. Turning off the unit will not reduce this risk.
- 5. **CAUTION** Only qualified personnel can install this device with battery.
- 6. **NEVER** charge a frozen battery.
- 7. For optimum operation of this inverter/charger, please follow required spec to select appropriate cable size. It's very important to correctly operate this inverter/charger.
- 8. Be very cautious when working with metal tools on or around batteries. A potential risk exists to drop a tool to spark or short circuit batteries or other electrical parts and could cause an explosion.
- 9. Please strictly follow installation procedure when you want to disconnect AC or DC terminals. Please refer to INSTALLATION section of this manual for the details.
- 10. One piece of 150A fuse is provided as over-current protection for the battery supply.
- 11. GROUNDING INSTRUCTIONS -This inverter/charger should be connected to a permanent grounded wiring system. Be sure to comply with local requirements and regulation to install this inverter.
- 12. NEVER cause AC output and DC input short circuited. Do NOT connect to the mains when DC input short circuits.
- 13. **Warning!!** Only qualified service persons are able to service this device. If errors still persist after following troubleshooting table, please send this inverter/charger back to local dealer or service center for maintenance.

# 3 INTRODUCTION

This is a multi-function inverter/charger, combining functions of inverter, solar charger and battery charger to offer uninterruptible power support with portable size. Its comprehensive LCD display offers user-configurable and easy-accessible button operation such as battery charging current, AC/solar charger priority, and acceptable input voltage based on different applications.

#### 3.1 Features

- □ Pure sine wave inverter
- □ Configurable input voltage range for home appliances and personal computers via LCD setting
- Configurable battery charging current based on applications via LCD setting
- □ Configurable AC/Solar Charger priority via LCD setting

- Overload/ Over temperature/ short circuit protection
- Cold start function

# 3.2 Basic System Architecture

The following illustration shows basic application for this inverter/charger. It also includes following devices to have a complete running system:

- ☐ Generator or Utility.

Consult with your system integrator for other possible system architectures depending on your requirements.

This inverter can power all kinds of appliances in home or office environment, including motor-type appliances such as tube light, fan, refrigerator and air conditioner.

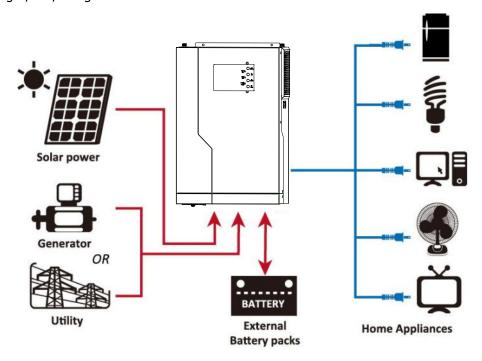

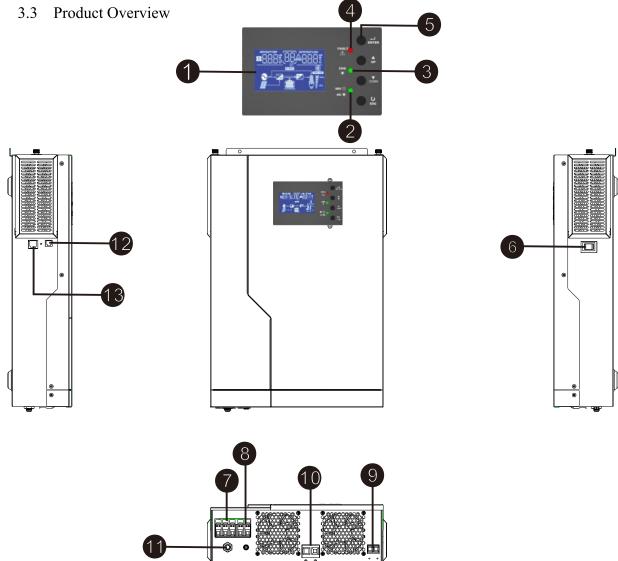

Figure 1 Hybrid Power System

- 1. LCD display
- 2. Status indicator
- 3. Charging indicator
- 4. Fault indicator
- 5. Function buttons
- 6. Power on/off switch
- 7. AC input
- 8. AC output
- 9. PV input
- 10. Battery input
- 11. Circuit breaker
- 12. USB communication port
- 13. RS-232 communication port

# 4 INSTALLATION

# 4.1 Unpacking and Inspection

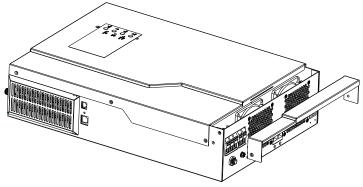

Before installation, please inspect the unit. Be sure that nothing inside the package is damaged. You should have received the following items inside of package:

- ☐ The unit x 1
- □ User manual x 1
- □ Communication cable x 1
- Software CD x 1
- □ DC Fuse x 1
- □ Ring terminal x 1

- □ Screws x 4

#### 4.2 Preparation

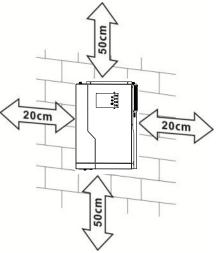

Before connecting all wirings, please take off bottom cover by removing two screws as shown below.

# 4.3 Mounting the Unit

Consider the following points before selecting where to install:

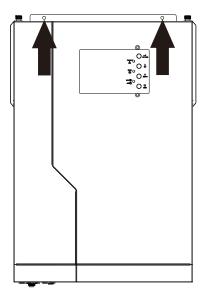

- 第 Do not mount the inverter on flammable construction materials.
- \( \mathbb{H} \) Install this inverter at eye level in order to allow the LCD display to be read at all times.
- For proper air circulation to dissipate heat, allow a clearance of approx. 20 cm to the side and approx. 50 cm above and below the unit.
- ${\mathbb H}$  The ambient temperature should be between 0°C and 55°C to ensure optimal operation.
- $\ensuremath{\mathfrak{X}}$  The recommended installation position is to be adhered to the wall vertically.
- Be sure to keep other objects and surfaces as shown in the diagram to guarantee sufficient heat dissipation and to have enough space for removing wires.

SUITABLE FOR MOUNTING ON CONCRETE OR OTHER NON-COMBUSTIBLE SURFACE ONLY.

Install the unit by screwing two screws. It's recommended to use M4 or M5 screws.

# 4.4 Battery Connection

**CAUTION:** For safety operation and regulation compliance, it's requested to install a separate DC over-current protector or disconnect device between battery and inverter. It may not be requested to have a disconnect device in some applications, however, it's still requested to have over-current protection installed. Please refer to typical amperage in below table as required fuse or breaker size.

**WARNING!** All wiring must be performed by a qualified personnel.

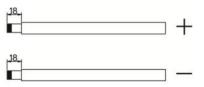

**WARNING!** It's very important for system safety and efficient operation to use appropriate cable for battery connection. To reduce risk of injury, please use the proper recommended cable as below.

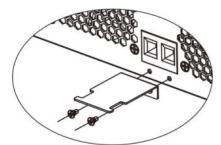

# **Recommended battery cable size:**

Model	Wire Size	Cable (mm²)	Torque value (max)
3.5KW/5.5KW	1 x 2AWG	35	2 Nm

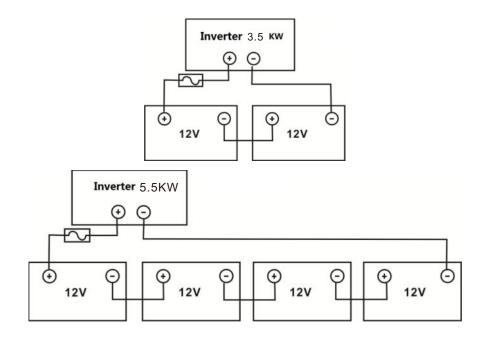

Please follow below steps to implement battery connection:

- 1. Remove insulation sleeve 18 mm for positive and negative conductors.
- 2. Suggest to put bootlace ferrules on the end of positive and negative wires with a proper crimping tool.
- 3. Fix strain relief plate to the inverter by supplied screws as shown in below chart.

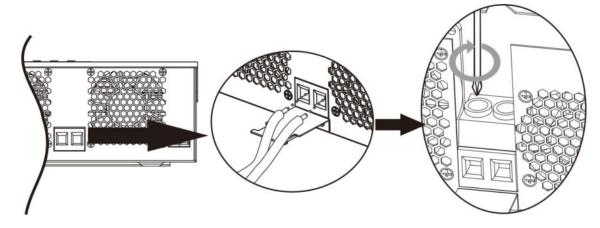

4. Connect all battery packs as below chart.

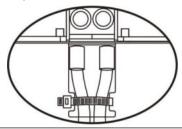

5. Insert the battery wires flatly into battery connectors of inverter and make sure the bolts are tightened with torque of 2 Nm in clockwise direction. Make sure polarity at both the battery and the inverter/charge is correctly connected and conductors are tightly screwed into the battery terminals.

Recommended tool: #2 Pozi Screwdriver

6. To firmly secure wire connection, you may fix the wires to strain relief with cable tie.

#### **WARNING: Shock Hazard**

Installation must be performed with care due to high battery voltage in series.

**CAUTION!!** Before making the final DC connection or closing DC breaker/disconnector, be sure positive (+) must be connected to positive (+) and negative (-) must be connected to negative (-).

# 4.5 AC Input/Output Connection

**CAUTION!!** Before connecting to AC input power source, please install a **separate** AC breaker between inverter and AC input power source. This will ensure the inverter can be securely disconnected during maintenance and fully protected from over current of AC input. The recommended spec of AC breaker is 32A for 3.5KW and 50A for 5.5KW.

**CAUTION!!** There are two terminal blocks with "IN" and "OUT" markings. Please do NOT mis-connect input and output connectors.

**WARNING!** All wiring must be performed by a qualified personnel.

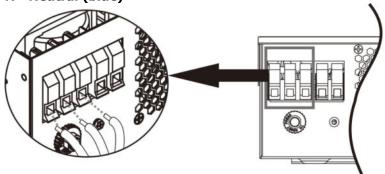

**WARNING!** It's very important for system safety and efficient operation to use appropriate cable for AC input connection. To reduce risk of injury, please use the proper recommended cable size as below.

# Suggested cable requirement for AC wires

Model	Gauge	Cable (mm²)	Torque Value
3.5KW	12 AWG	4	1.2 Nm
5.5KW	10 AWG	6	1.2 Nm

Please follow below steps to implement AC input/output connection:

- 1. Before making AC input/output connection, be sure to open DC protector or disconnector first.
- 2. Remove insulation sleeve 10mm for six conductors. And shorten phase L and neutral conductor N 3 mm.
- 3. Insert AC input wires according to polarities indicated on terminal block and tighten the terminal screws. Be sure to connect PE protective conductor ( ) first.
  - Ground (yellow-green)
  - **L**→**LINE** (brown or black)
  - N→Neutral (blue)

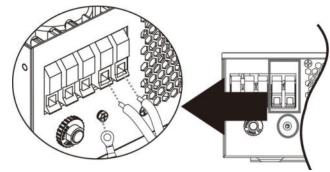

# **WARNING:**

Be sure that AC power source is disconnected before attempting to hardwire it to the unit.

4. Then, insert AC output wires according to polarities indicated on terminal block and tighten terminal screws. Be sure to connect PE protective conductor ( ) first.

5. Make sure the wires are securely connected.

**CAUTION:** Appliances such as air conditioner are required at least 2~3 minutes to restart because it's required to have enough time to balance refrigerant gas inside of circuits. If a power shortage occurs and recovers in a short time, it will cause damage to your connected appliances. To prevent this kind of damage, please check manufacturer of air conditioner if it's equipped with time-delay function before installation. Otherwise, this inverter/charger will trig overload fault and cut off output to protect your appliance but sometimes it still causes internal damage to the air conditioner.

#### 4.6 PV Connection

**CAUTION:** Before connecting to PV modules, please install **separately** a DC circuit breaker between inverter and PV modules.

**WARNING!** It's very important for system safety and efficient operation to use appropriate cable for PV module connection. To reduce risk of injury, please use the proper recommended cable size as below.

Model	Wire Size	Cable (mm²)	Torque value (max)
3.5KW/5.5KW	1 x 12AWG	4	1.2 Nm

#### **PV Module Selection:**

When selecting proper PV modules, please be sure to consider below parameters:

- 1. Open circuit Voltage (Voc) of PV modules not exceeds max. PV array open circuit voltage of inverter.
- 2. Open circuit Voltage (Voc) of PV modules should be higher than min. battery voltage.

said reitage (ree) or reitage entering se mg. en anan min saide, reitager			
INVERTER MODEL	3.5KW	5.5KW	
Max. PV Array Open Circuit Voltage	500Vdc		
PV Array MPPT Voltage Range	120Vdc~450Vdc		

Take 250Wp PV module as an example. After considering above two parameters, the recommended module configurations are listed as below table.

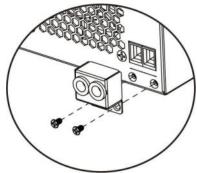

of figurations are listed as below table.					
Solar Panel Spec.	SOLAR INPUT	Olh , of manala	Total input		
(reference) - 250Wp	(Min in serial: 6 pcs, max. in serial: 13 pcs)	Q'ty of panels	power		
- Vmp: 30.1Vdc	6 pcs in serial	6 pcs	1500W		
- Imp: 8.3A	8 pcs in serial	8 pcs	2000W		
- Voc: 37.7Vdc	12 pcs in serial	12 pcs	3000W		
- Isc: 8.4A	13 pcs in serial	13 pcs	3250W		
- Cells: 60	8 pieces in serial and 2 sets in parallel	16 pcs	4000W		
	10 pieces in serial and 2 sets in parallel	20 pcs	5000W		

#### **PV Module Wire Connection**

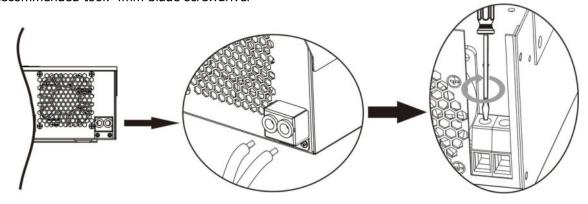

Please follow below steps to implement PV module connection:

- 1. Remove insulation sleeve 10 mm for positive and negative conductors.
- 2. Suggest to put bootlace ferrules on the end of positive and negative wires with a proper crimping tool.
- 3. Fix PV wire cover to the inverter with supplied screws as shown in below chart.

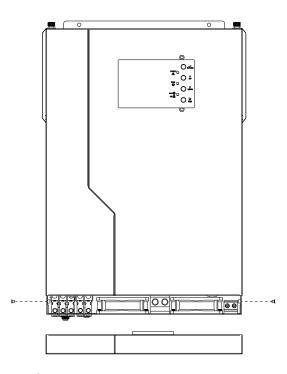

4. Check correct polarity of wire connection from PV modules and PV input connectors. Then, connect positive pole (+) of connection wire to positive pole (+) of PV input connector. Connect negative pole (-) of connection wire to negative pole (-) of PV input connector. Screw two wires tightly in clockwise direction. Recommended tool: 4mm blade screwdriver

# 4.7 Final Assembly

After connecting all wirings, please put bottom cover back by screwing two screws as shown below.

# 4.8 Communication Connection

1. Please use supplied communication cable to connect to inverter and PC. Insert bundled CD into a computer and follow on-screen instruction to install the monitoring software. For the detailed software operation,

please check user manual of software inside of CD.

# 2. Wi-Fi cloud communication (option):

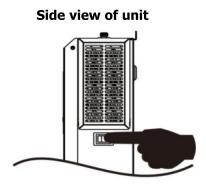

Please use supplied communication cable to connect to inverter and Wi-Fi module. Download APP and installed from APP store, and Refer to "Wi-Fi Plug Quick Installation Guideline" to set up network and registering. The inverter status would be shown by mobile phone APP or webpage of computer.

# 3. GPRS cloud communication (option):

Please use supplied communication cable to connect to inverter and GPRS module, and then applied external power to GPRS module. Download APP and installed from APP store, and Refer to "GPRS RTU Quick Installation Guideline" to set up network and registering. The inverter status would be shown by mobile phone APP or webpage of computer.

# **5 OPERATION**

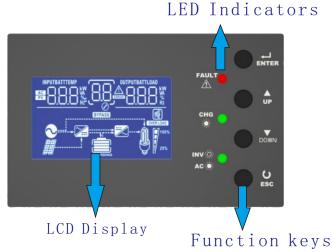

# 5.1 Power ON/OFF

Once the unit has been properly installed and the batteries are connected well, simply press On/Off switch (located on the button of the case) to turn on the unit.

# 5.2 Operation and Display Panel

The operation and display panel, shown in below chart, is on the front panel of the inverter. It includes three indicators, four function keys and a LCD display, indicating the operating status and input/output power information.

# **LED Indicator**

LED Indicator			Messages		
<b>※</b> AC/ <b>※</b> INV	Green	Solid On	Output is powered by utility in Line mode.		
AC/ ACINV	Green	Flashing	Output is powered by battery or PV in battery mode.		
<b>★ CHG</b>	Green	Solid On	Battery is fully charged.		
₩ CHG		Flashing	Battery is charging.		
A FAILLT	Solid On		Fault occurs in the inverter.		
<b>▲ FAULT</b>	LT Red	Flashing	Warning condition occurs in the inverter.		

# **Function Keys**

Function Key	Description	
ESC	To exit setting mode	
UP	To go to previous selection

# 5.4 LCD Setting

After pressing and holding ENTER button for 3 seconds, the unit will enter setting mode. Press "UP" or "DOWN" button to select setting programs. And then, press "ENTER" button to confirm the selection or ESC button to exit.

# **Setting Programs:**

Program	Description Description	Selectable option	
00	Exit setting mode	Escape	
		Utility first (default)	Utility will provide power to the loads as first priority.  Solar and battery energy will provide power to the loads only when utility power is not available.
01	Output source priority: To configure load power source priority	Solar first	Solar energy provides power to the loads as first priority.  If solar energy is not sufficient to power all connected loads, utility will supply power to the loads at the same time.  Battery provides power to the loads only when any one condition happens:  - Solar energy and utility is not available.  - Solar energy is not sufficient and utility is not available.
		SBU priority  001560	Solar energy provides power to the loads as first priority.  If solar energy is not sufficient to power all connected loads, battery energy will supply power to the loads at the same time.  Utility provides power to the loads only when battery voltage drops to either low-level warning voltage or the setting point in program 12.
02	Maximum charging current: To configure total charging current for solar and utility chargers. (Max. charging current = utility charging current + solar charging current)	10A 02 10^ 30A 02 30^	20A 02 20^ 40A 02 40^

# 5.5 Display Setting

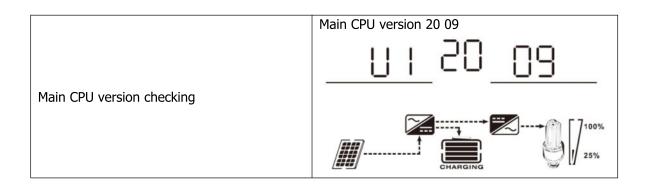

The LCD display information will be switched in turns by pressing "UP" or "DOWN" key. The selectable information is switched as below order: input voltage, input frequency, PV voltage, charging current, charging power, battery voltage, output voltage, output frequency, load percentage, load in Watt, load in VA, load in Watt, DC discharging current, main CPU Version.

Selectable information	LCD display
Input voltage/Output voltage (Default Display Screen)	Input Voltage=230V, output voltage=230V  OUTPUT  OUTPU
Input frequency	Input frequency=50Hz  OUTPUT  AG 5 0
PV voltage	PV voltage=260V  INPUT 280 v  EXPASS  OUTPUT 230 v  EXPASS  OHARGING

	When connected load is lower than 1kVA, load in
	VA will present xxxVA like below chart.
	100% CHARGING
Load in VA	When load is larger than 1kVA ( $\ge$ 1KVA), load in VA will present x.xkVA like below chart.
	BATT LOAD LOAD VA
	CHARGING (100%)
	When load is lower than 1kW, load in W will present xxxW like below chart.
	_ 25.5' _ 270°
Load in Watt	EYPASS  CHARGING  CHARGING
Load III Watt	When load is larger than 1kW ( $\ge$ 1KW), load in W will present x.xkW like below chart.
	_ 255'
	EYPASS  CHARGING  CHARGING  EYPASS  100% 25%
	Battery voltage=25.5V, discharging current=1A
Battery voltage/DC discharging current	
	CHARGING 25%

# 5.6 Operating Mode Description

Operation mode	Description	LCD display
Standby mode / Power saving mode  Note:  *Standby mode: The inverter is not turned on yet but at this time, the inverter can charge battery without AC output.  *Power saving mode: If enabled, the output of inverter will be off when connected load is pretty low or not detected.	No output is supplied by the unit but it still can charge batteries.	Charging by utility and PV energy.  Charging by utility.  Charging by PV energy.  No charging.
Fault mode Note: *Fault mode: Errors are caused by inside circuit error or external reasons such as over temperature, output short circuited and so on.	PV energy and utility can charge batteries.	Charging by utility and PV energy.  Charging by utility.  Charging by PV energy.  No charging.

Operation mode	Description	LCD display
	The unit will provide output power from the mains. It will also charge the battery at line mode.	Charging by utility and PV energy.  BYPASS  100% 25%
Line Mode	The unit will provide output power from the mains. It will also charge the battery at line mode.	Charging by utility.  BYPASS  If "solar first" is selected as output source priority and solar energy is not sufficient to provide the load, solar energy and the utility will provide the loads and charge the battery at the same time.  If "solar first" is selected as output source priority and battery is not connected, solar energy and the utility will provide the loads.  Power from utility.  BYPASS  Power from battery and PV energy.
Battery Mode	The unit will provide output power from battery and PV power.	PV energy will supply power to the loads and charge battery at the same time.

# 5.7 Battery Equalization Description

Equalization function is added into charge controller. It reverses the buildup of negative chemical effects like stratification, a condition where acid concentration is greater at the bottom of the battery than at the top. Equalization also helps to remove sulfate crystals that might have built up on the plates. If left unchecked, this condition, called sulfation, will reduce the overall capacity of the battery. Therefore, it's recommended to equalize battery periodically.

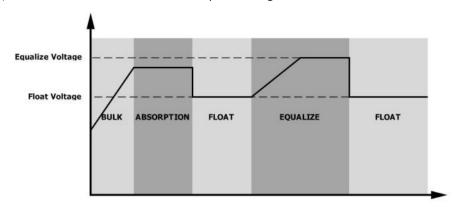

# **∺** How to Apply Equalization Function

You must enable battery equalization function in monitoring LCD setting program 30 first. Then, you may apply this function in device by either one of following methods:

- 1. Setting equalization interval in program 35.
- 2. Active equalization immediately in program 36.

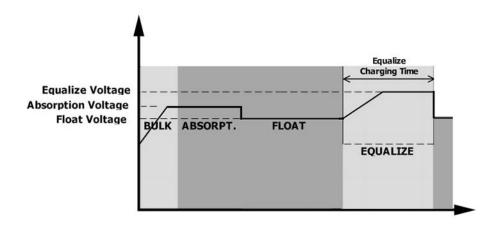

#### **₩** When to Equalize

In float stage, when the setting equalization interval (battery equalization cycle) is arrived, or equalization is active immediately, the controller will start to enter Equalize stage.

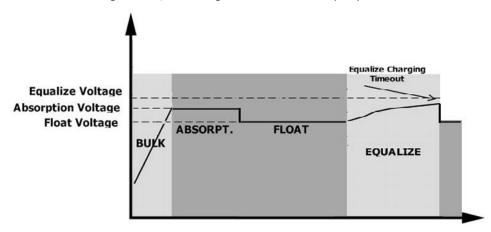

# **#** Equalize charging time and timeout

In Equalize stage, the controller will supply power to charge battery as much as possible until battery voltage raises to battery equalization voltage. Then, constant-voltage regulation is applied to maintain battery voltage at the battery equalization voltage. The battery will remain in the Equalize stage until setting battery equalized time is arrived.

However, in Equalize stage, when battery equalized time is expired and battery voltage doesn't rise to battery equalization voltage point, the charge controller will extend the battery equalized time until battery voltage achieves battery equalization voltage. If battery voltage is still lower than battery equalization voltage when battery equalized timeout setting is over, the charge controller will stop equalization and return to float stage.

# 5.8 Fault Reference Code

Fault Code	Fault Event	Icon on
01	Fan is locked when inverter is off.	
02	Over temperature	[02]
03	Battery voltage is too high	[03]
04	Battery voltage is too low	[19]
05	Output short circuited or over temperature is detected by internal converter components.	
06	Output voltage is too high.	(DE)
07	Overload time out	
08	Bus voltage is too high	
09	Bus soft start failed	<u> </u>
51	Over current or surge	5

52	Bus voltage is too low	[52]
53	Inverter soft start failed	[53]
55	Over DC voltage in AC output	<u>[55]</u>
57	Current sensor failed	[5]
58	Output voltage is too low	<u>58</u>
59	PV voltage is over limitation	[59]

# 5.9 Warning Indicator

Warning Code	Warning Event	Audible Alarm	Icon flashing
01	Fan is locked when inverter is on.	Beep three times every second	
03	Battery is over-charged	Beep once every second	[D3 <sup>A</sup>
04	Low battery	Beep once every second	[]Y <u>^</u>
07	Overload	Beep once every 0.5 second	OVERLOAD # 100%
10	Output power derating	Beep twice every 3 seconds	[ID] <sup>A</sup>
15	PV energy is low.	Beep twice every 3 seconds	[15] <sup>A</sup>
<i>E</i> 9	Battery equalization	None	[E9] <sup>A</sup>
68	Battery is not connected	None	[6P^

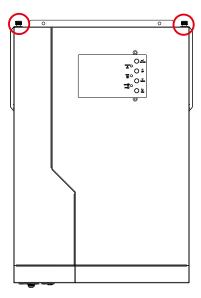

# **6 CLEARANCE AND MAINTENANCE FOR ANTI-DUST KIT**

# 6.1 Overview

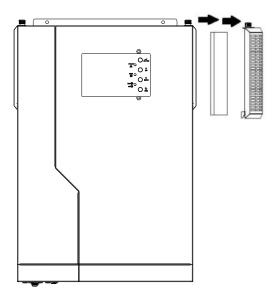

Every inverter is already installed with anti-dusk kit from factory. Inverter will automatically detect this kit and activate internal thermal sensor to adjust internal temperature. This kit also keeps dusk from your inverter and increases product reliability in harsh environment.

#### 6.2 Clearance and Maintenance

**Step 1:** Please loosen the screw in counterclockwise direction on the top of the inverter.

**Step 2:** Then, dustproof case can be removed and take out air filter foam as shown in below chart.

**Step 3:** Clean air filter foam and dustproof case. After clearance, re-assemble the dust-kit back to the inverter.

**NOTICE:** The anti-dust kit should be cleaned from dust every one month.

# **SPECIFICATIONS**

# **8 TROUBLE SHOOTING**

Problem	LCD/LED/Buzzer	Explanation / Possible cause	What to do	
Unit shuts down automatically during startup process.	LCD/LEDs and buzzer will be active for 3 seconds and then complete off.	The battery voltage is too low (<1.91V/Cell)	Re-charge battery.     Replace battery.	
No response after power on.  No indication.		The battery voltage is far too low. (<1.4V/Cell)     Internal fuse tripped.	<ol> <li>Contact repair center for replacing the fuse.</li> <li>Re-charge battery.</li> <li>Replace battery.</li> </ol>	
	Input voltage is displayed as 0 on the LCD and green LED is flashing.	Input protector is tripped	Check if AC breaker is tripped and AC wiring is connected well.	
Mains exist but the unit works in battery mode.	Green LED is flashing.	Insufficient quality of AC power. (Shore or Generator)	<ol> <li>Check if AC wires are too thin and/or too long.</li> <li>Check if generator (if applied) is working well or if input voltage range setting is correct. (UPS♠ Appliance)</li> </ol>	
	Green LED is flashing.	Set "Solar First" as the priority of output source.	Change output source priority to Utility first.	
When the unit is turned on, internal relay is switched on and off repeatedly.	LCD display and LEDs are flashing	Battery is disconnected.	Check if battery wires are connected well.	
	Fault code 07	Overload error. The inverter is overload 110% and time is up.	Reduce the connected load by switching off some equipment.	
	Fault code 05	Output short circuited.	Check if wiring is connected well and remove abnormal load.	
		Temperature of internal converter component is over 120°C.	Check whether the air flow of the unit is blocked or whether the ambient temperature is too high.	
	Fault code 02	Internal temperature of inverter component is over 100°C.		
		Battery is over-charged.	Return to repair center.	
Buzzer beeps continuously and red LED is on.	Fault code 03	The battery voltage is too high.	Check if spec and quantity of batteries are meet requirements.	
	Fault code 01	Fan fault	Replace the fan.	
	Fault code 06/58	Output abnormal (Inverter voltage below than 190Vac or is higher than 260Vac)	<ol> <li>Reduce the connected load.</li> <li>Return to repair center</li> </ol>	
	Fault code 08/09/53/57	Internal components failed.	Return to repair center.	
	Fault code 51	Over current or surge.	Restart the unit, if the error happens again, please return	
	Fault code 52	Bus voltage is too low.		
	Fault code 55	Output voltage is unbalanced.	to repair center.	

# 9 Appendix: Approximate Back-up Time Table

Model	Load (W)	Backup Time @ 24Vdc 100Ah (min)	Backup Time @ 24Vdc 200Ah (min)
	300	449	1100
	600	222	525
	900	124	303
	1200	95	227
3.5KW	1500	68	164
	1800	56	126
	2100	48	108
	2400	35	94
	2700	31	74
	3200	28	67

Model	Load (W)	Backup Time @ 48Vdc 100Ah (min)	Backup Time @ 48Vdc 200Ah (min)
	500	613	1288
	1000	268	613
	1500	158	402
	2000	111	271
5.5KW	2500	90	215
	3200	76	182
	3500	65	141
	4000	50	112
	4500	44	100
	5000	40	90

**Note:** Backup time depends on the quality of the battery, age of battery and type of battery. Specifications of batteries may vary depending on different manufacturers.
